BRICK CREATIONS

The Hagemeister clinker factory defines itself through its passion for clinker products and their uses in architecture. The use of clinker bricks as a construction material has in the past, and continues to shape the look and character of entire regions.

The full colour spectrum is offered by Hagemeister clinker bricks; from the sandy white-yellow of Danish clinker bricks and the almost black-red of British clinker to the light red of Baltic gothic clinker architecture and the dark red-blue iridescent clinkers traditionally seen on Friesian houses.

Aside from these strong visual statements, clinker also meet the key demand of contemporary.
SUSTAINABILITY

This term combines aesthetic, economic, ecological and social factors.

As well as the traditional clinker qualities such as lasting value, durability, zero maintenance and colour fastness, today’s clinkers now also offer contemporary shapes, individual colours, distinct feel, advanced production techniques and an important partnership between builder, architect and manufacturer.

The use of clinker bricks is therefore ideal for those looking for quality of life and security, health and well being, environmental friendliness and ultimately, economy and aesthetics in their building.

CONTINUITY

Hagemeister clinker brick factory has been producing facing and paving bricks for over one hundred years.

The classic circular kiln dating back to the factory’s foundation has long since made way for state-of-the-art computer-operated kiln technology. Through this technology, our capacity and quality has kept to meet modern demand, though our age-old formulas and the expertise of the earlier kiln masters continue to underpin clinker production at Hagemeister and inspire the company’s values.

QUALITY

The Hagemeister clinker brick factory owes its renowned high quality and its special character to the experience gained by generations of kiln masters combined with advanced computer-controlled production techniques.

The careful selection and combination of raw materials, high firing temperatures of up to 1,250° C as well as long-standing expertise underpin the superior quality of our clinker bricks, guaranteeing natural purity, optimal processing and bricklaying characteristics as well as excellent brickwork properties.

The entire process is continually certified in accordance with the DIN EN ISO 9001 quality management system.

Five generations have guided the company to where it stands now as one of the leading clinker brick specialists in Germany and neighbouring European countries.
YOUR SATISFACTION IS OUR NUMBER ONE PRIORITY

■ CAPACITY

The production capacity of the Hagemeister kilns is sufficient to build a town with 10,000 single-family houses per year.

State-of-the-art production plants and optimised firing processes enable a volume of approx. 100 million clinkers annually.

Hagemeister’s ability to supply very large quantities of bricks from a single firing makes the company a competent partner in the realisation of large projects both in Germany and on an international scale.

■ INNOVATION

Active market-oriented research and development as well as close cooperation with planners is the basis of Hagemeister’s wide range of attractive solutions.

More than 300 clinker brick colours, formats and textures for facades as well as an extensive range of paving bricks are available for the realisation of attractive paving ideas.

In addition, Hagemeister is happy to meet individual architectural requirements in projects and will develop customised clinker solutions in cooperation with the project partners.

■ LOGISTICS

The central geographic location with ideal infrastructure connections and a tightly knit network of sales associates throughout Germany enable fast and effective supplies and give builders and customers the benefit of dealing with local contacts.

Be it Hamburg, Munich, Aachen or Berlin – within three days, at the latest, the clinker bricks are available at any building site, anywhere in Germany.

Numerous reference projects in Denmark, Belgium, the Netherlands, Switzerland, Italy, Great Britain, Poland, Lithuania, Russia and even Asia have proven Hagemeister’s comprehensive logistics structure and distribution capabilities on an international scale as well.

■ SERVICE

Close cooperation with architects and clients also at the preliminary planning stage as well as sound advice during the construction stage guarantee a smooth project flow.

A team of qualified and experienced advisors ensures that all customer requirements are identified and met.

Customer satisfaction is key to Hagemeister’s continued success and the company works to earn it every day.

Aside from these strong visual statements, clinker also meet the key demand of contemporary.

TOUCH AND FEEL OUR CLINKER BRICKS

Feel and experience our clinker bricks at our showroom in Nottuln, Germany. Floor-to-ceiling sample walls and large indoor and outdoor paving areas demonstrate the visual and haptic properties of Hagemeister clinkers. Numerous sample applications offer stimulation and ideas for your plans and designs.

Located only 500 m from the A 43 motorway (exit no. 4, Nottuln, Billerbeck) in the direction of Nottuln, the red brick chimney will guide you to this unique clinker exhibition.

The Hagemeister team looks forward to welcoming you.
